1. Buprenorphine/Naloxone has a maximum daily dosage of 24 mg/day (based on buprenorphine) for 90 consecutive days. After 90 days has elapsed, a maximum daily dosage of up to 16 mg/day (based on buprenorphine) will be allowed.

2. Palivizumab claims require the prescriber to submit a Clinical Pre-Authorization request to the RxPA unit for approval.

* There is a 15 day supply within a 30 day period for select opioid agents. Overrides for opioid therapy beyond 15 days within a 30 day period will require the prescriber to submit an Opioid Analgesic Treatment Worksheet to the RxPA Unit for approval. Exemptions to the opioid quantity limit edits require a diagnosis code of cancer or palliative care entered at Point of Sale (POS).

**There is a short-acting opioid 7 day quantity limit for opioid naïve recipients. For this edit, opioid naïve recipients are defined as those who have not had an opioid claim paid within the last 90 days. Overrides for opioid naïve recipients who exceed the short-acting opioid quantity limit will require the prescriber to submit an Opioid Analgesic Treatment Worksheet to the RXP Unit for approval. Exemptions to the opioid quantity limit edits require a diagnosis code of cancer or palliative care entered at Point of Sale (POS).

Note:

ER = extended release

IR = immediate release

SL = Sublingual
